Planetary Centrifugal Mixer

THINKY MIXER
ARE-310

Instruction Manual

WARNING

- Read this manual carefully and be sure to understand the contents before operation.
- Always keep this manual in the designated place for easy access whenever needed.
4) Pull the fuse holder by hand.

5) Remove the fuse holder.

6) Insert the fuse holder into the fuse port of the UNIT.

---

ARE-310  Instruction Manual

Version  EX-4827  
(JP: EX-4826)

Date of Issue  November 30, 2020

Published by THINKY CORPORATION

A blown fuse must be discarded in accordance with national and local laws and regulations.
Introduction

THINKY MIXER "ARE-310" (hereafter called "UNIT") is a highly efficient mixer developed to simultaneously mix and defoam materials (e.g. liquids and powder).

Please read this manual carefully and be sure to understand the contents before operating the UNIT.

There is a high-voltage electrical part and high-speed rotation part inside the UNIT. This UNIT is designed to prevent possible danger from the parts, but serious or minor accidents may occur and/or the protective function may be impaired if you do not comply with the instructions in this manual.

Please DO NOT use the UNIT if anything is unclear, and contact the dealer from whom you purchased the UNIT or THINKY.

- Contact Information
  Dealer or THINKY Sales Representative or THINKY CORPORATION
  Marketing Office Tokyo, Japan (HQ): 2-16-2 Sotokanda, Chiyoda-ku, Tokyo, #101-0021 Japan

• Safety Indications

The following safety precautions and symbols are used throughout this manual. Please read these safety precautions carefully and be sure you understand the contents before using the UNIT. Safety precautions are classified into the following 3 levels to prevent possible accidents as a result of mishandling or incorrect operation.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>DANGER</td>
<td>Indicate(s) a hazardous situation that, if not avoided, will result in death or serious injury.</td>
</tr>
<tr>
<td>WARNING</td>
<td>Indicate(s) a hazardous situation that, if not avoided, could result in death or serious injury.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>Indicate(s) a hazardous situation that, if not avoided, could result in minor or moderate injury.</td>
</tr>
</tbody>
</table>

In addition to the above, the following symbols are used.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Safety notes. Indicate(s) risk of damaging the UNIT from improper use.</td>
</tr>
<tr>
<td></td>
<td>Additional information and tips.</td>
</tr>
<tr>
<td></td>
<td>Reference section(s)</td>
</tr>
</tbody>
</table>
THINKY CORPORATION (hereafter called "THINKY") shall not be responsible for the results of operations not as described in this manual or for use not conforming to the UNIT's intended use.

- The contents of this manual are subject to change, associated with continual improvement of the UNIT, without notice.
- Copying this manual in whole or in part, without written authorization from THINKY, is strictly prohibited.
- Upon resale or rental of the UNIT to another party, make sure to enclose this manual and any other documents supplied at initial delivery.
- Comply with national and local laws and regulations for the installation and operation procedures of this UNIT, and the disposal of its components.
- Contact THINKY for how to disassemble the UNIT for disposal.
Warranty and Liability

Please note the following conditions concerning THINKY’s warranty and liability for the UNIT:

THINKY warrants all the products to be free from specification-based functional and performance defects within 12 months from the date of delivery/inspection.
The date of delivery/inspection will be the date written in the warranty or other valid proof of purchase or in the product purchase history database maintained by THINKY.
For failure occurring during the warranty period, we will repair or replace any defective component free of charge at the decision (discuss as appropriate) of THINKY except for cases coming under the conditions listed on the next page.

We accept no product returns for reasons other than repair or replacement.

Please contact the dealer from whom you purchased the UNIT or THINKY’s service personnel when requesting the warranted service. When returning a product for repair, please follow the instructions below.

● When Returning Product for Repair
  - Return products shall be sent in the approved way to the location designated by your dealer or THINKY together with the document with the date of delivery/inspection certifying the warranty period.
  - Please pack the UNIT in its original shipping carton or in a suitable packing material offering a similar degree of protection.
  - The cover of the UNIT may be opened during shipping, so please place packing materials between the cover and the UNIT, close and tape the cover securely.
  - To avoid damaging the UNIT during shipping, please protect accessories such as power cables with packing materials.

2. Specification
3. Any Unit
4. Accessory
5. Failure
6. Responsibility
7. Fault
8. Consumption
9. Storing
10. Specific
11. Any
The following are NOT covered by the warranty.

1. Product-return shipping costs.
2. Second-hand unit NOT purchased through THINKY or our designated dealer.
   For those who purchased a second-hand unit from THINKY, the warranty conditions shall be subject to the provisions of each purchase contract.
3. Any UNIT distributed by unauthorized dealers
4. Any failure, damage or defect caused by components and/or accessories a customer installed in the UNIT, even though they are procured from vendors designated by THINKY. Any other unauthorized modification, disassemble, and/or repair of the UNIT by a customer. Please note that for such UNITS, we may even decline a request for paid repair service.
5. Any UNIT without a serial number or with a changed serial number
6. Any failure, damage or defect caused by or resulting from the following:
   - improper installation or usage of the UNIT
   - improper operation with non-standard voltage or power supply
   - receiving service or modification by an unauthorized service facility
   - misuse or unauthorized modification by customer
   - dropping hazardous/inflammable containers or adapters into the UNIT
   - scattering or spillage of mixing materials or solvents
   - excessive use or careless handling such as over-the-limit mixing
   - unavoidable accidents such as fires or floods
   - any other events similar thereto
7. Any failure, damage or defect caused by the use of spare parts or consumables, etc. that are not covered by this warranty.
8. Damage caused by aging deterioration, scratches or dents of the UNIT.
9. Any failure, damage or defect caused by dropping, vibration or impact to the UNIT by a customer at the time of or after the delivery.
10. Any failure, damage, defect, or corrosion (rust) caused by operation or storing environment exceeding the conditions stated in the specifications.
11. Any failure, damage or defect caused by the parts, system or specifications provided/designated by a customer.
12. Cost of breakage, physical loss of mixed materials, peripheral equipment, buildings, and expenses for temporary replacement unit/spare parts, lost profit, and/or any other incidental or consequential loss in general caused by this UNIT or its failure.

13. Quality of products produced by using the UNIT.

14. The following consumables:
   - containers
   - drive belt
   - fuse
   - adapter

1. Safety Precautions

1-1 Safety Precautions

The UNIT is designed with due consideration for safety, but there may be great danger if handled improperly. In order to prevent accidents, please be sure to follow the safety precautions.

1-1-1 General

- Use of the UNIT is restricted to a specialist; read this manual carefully and be sure to understand the contents before operation.
- Do not use the UNIT for purposes other than mixing and defoaming.
- Do not disassemble or modify the UNIT.
- Do not operate the UNIT under the following circumstances:
  - In a volatile atmosphere or where gas or steam is present
  - Around flammable substances
- Do not handle the power plug with wet hands.
- Be sure to connect the ground of the power plug.
- Do not handle the UNIT within the reach of children.

- Do not get on top of the UNIT.
- Do not place any object on the UNIT.
- Do not put fingers or any other objects into the opening.
- Do not place anything inside or spill liquid on the UNIT.
- Do not wet the UNIT.
- Do not operate the UNIT if there is any external damage such as breakages or large dents.
- Do not obstruct the heat release.
- When not in use, disconnect the plug from the outlet.
- Pull the plug when disconnecting. Do not pull the cable.
- Do not supply any voltage other than as rated.
- Do not operate/store outdoors.
1-1-2 Installation

- Turn off the power switch and disconnect the plug before locking or unlocking shipping locks.

- Do not install the UNIT in the following environments:
  - Unstable location
  - Location subject to vibration or impact
  - Presence of moisture, oil, chemicals, excessive dust, metal powder or salt
  - With high humidity or dew condensation due to rapid temperature change
  - In direct sunlight, rain or wind
  - Unstated ambient environment
  (See 2-2 Specifications “Working Environment Conditions”)

- Do not damage, modify, forcibly bend or pull the power cable. Do not place anything on the power cable.
- Do not use a damaged power cable.
- Connect the plug of the UNIT to the dedicated outlet.

※ Please contact the dealer from whom you purchased the UNIT or THINKY’s sales department/service department for installation/transportation of the UNIT.
1-1-3 Operation

- Do not use dangerous, toxic and/or poisonous substances.
- Do not mix any harmful and hazardous substances.
- The UNIT is not explosion-proof. Due to rising temperature or volume increase by chemical reactions, substances (especially solvents with a low-boiling) in the container may ignite or explode if a leakage occurs in the UNIT.

**WARNING**

- Do not operate with volatile organic solvent, strong acid/alkaline materials.
  * Please contact the dealer from whom you purchased the UNIT or THINKY when such an operation is unavoidable.
- If there is an abnormal vibration, sound, odor or smoke, immediately stop operation, turn off the power switch and disconnect the plug.
- Do not open the door during operation.
- Do not operate with the door open.
- Turn off the power switch and disconnect the plug if rotation does not stop.
- Set the adapter or container into the cup holder properly.

**CAUTION**

- Comply with the fire service act, poisonous and deleterious substances control act, and/or related environmental pollution prevention acts when using the UNIT.
- Do not operate with wet hands.
- Do not shake or relocate the UNIT during operation.
- Turn off the power switch in case of power failure.
- Do not insert fingers into the openings around the cup holder.
- Do not operate the UNIT continuously for a long time. Secure time for cool down.
- Make sure no fingers or objects are caught in the door when closing.
- Keep magnets or magnetic objects away from the control panel.
- Attend to the UNIT within 30 minutes after operation.
1-1-4 Maintenance

- Turn off the power switch and disconnect the plug before maintenance.
- Do not disassemble any part for inspection or repair by yourself.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
</table>

- Wipe off the plug connecting part with a dry cloth if dust adheres.

1-1-5 Material Handling

- Always obtain a Safety Data Sheet (SDS) for all the materials from the suppliers and handle them only after you have fully understood its characteristics and the safety measures.
- Always use adequate protective equipment and wear appropriate clothing as specified in the applicable SDS when handling the material.
- Disposal of the material must comply with the national and local laws and regulations where the UNIT is used.

| CAUTION |

1-1-6 Disposal

- Disposal of the UNIT and consumables must comply with the national and local laws and regulations where the UNIT is used.
1-2 Labels

The following labels are on the UNIT. Please understand the contents thoroughly before using the UNIT.

If a label is dirty, damaged or illegible, immediately contact the dealer from whom you purchased the UNIT or THINKY and ask for new labels. THINKY will provide new labels (paid service).

**WARNING**

- Do not remove or stain any label.

**Caution for high voltage**
Danger of electric shock, burns or death by neglecting safety checks or incorrect operation.

**Rotating mechanisms inside the safety cover**
Danger of lacerations or bone fractures by hands or clothing getting caught in moving parts.
1-2-1 Seals and Labels

(1) CAUTION on Operations
1. Please measure total gross weight of materials with container and adaptor on digital scale.
2. Please adjust balance according to the gross weight.
3. Please use only designated containers and adaptors.
   Disregarding above CAUTION will cause severe damage to the machine.

(2) DANGER
Do not use toxic, flammable, explosive or any other dangerous materials for mixing.

(3) CAUTION
Please be sure to let the unit cool down after long time operation.

(4) DANGER
Electrical Shock Hazard
DO NOT remove the cover.

(5) Door Unlock Tool
Insert the tool into the Door Unlock Slot on the front panel in case of no power supply.

2. Overview and Specifications

2-1 Overview (Purpose, Operating Principles, Features)

- **Purpose of the UNIT**
  This UNIT is a planetary centrifugal mixer developed to simultaneously mix and defoam various kinds of materials (e.g., liquids and powder, etc.).
  - The UNIT cannot mix when using only powder materials.
  - If used for other than the above purpose or for changed purposes, contact the dealer from whom you purchased the UNIT or THINKY.

- **Operating Principle**
  The container loaded with materials rotates while revolving at a certain radius around an axis. This creates a big centrifugal force continuously, which compresses existing air bubbles out of the materials and mixes them at the same time.

![Image of rotation and revolution]

- **Features**
  - With the specified container, a maximum of 250 ml/310 g (gross weight) materials can be mixed and defoamed.
  - The mixing mode for rotation (maximum 800 rpm)/revolution (maximum 2,000 rpm) and the defoaming mode for rotation (maximum 60 rpm)/revolution (maximum 2,200 rpm) can be set independently. Continuous operation is also possible.
  - Non-contact method (without mixing blade) prevents material deterioration.
  - Highly constant reproducibility can be realized in mixing/defoaming without individual variation.

</tbody>
</table>

* Use appropriate Phillips screwdrivers with the above 3 kinds of Phillips head screws.*
3-3 Unlocking and Storing Shipping Locks

The rotating part of the UNIT is securely fixed with shipping locks to prevent damage from shipping. Remove the shipping locks before operation.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The shipping locks and attached screws are needed when shipping the UNIT again. Be sure to keep them in the designated positions to avoid losing them.</td>
</tr>
<tr>
<td>• Be sure to store the removed shipping locks and screws as indicated. Otherwise, the rotating part will be exposed partially and may cause serious damage during operation.</td>
</tr>
</tbody>
</table>

- Removing and Storing Shipping Lock A

Remove shipping lock A from the upper inside of the UNIT and store it in the back side.

1) Loosen the 2 screws and remove the shipping lock A by pulling up the head of the screws.

The screws have rubber retaining washers to prevent them from falling out.

2) Fix and store the shipping lock A with the 2 screws to the back of the UNIT.
- Removing and Storing Shipping Lock B

Remove to store shipping lock B from the back of the UNIT.

1) Remove 3 screws (1 long, 2 short) from the shipping lock B, and then pull out the shipping lock from the UNIT.

   The inside of the UNIT will be visible.

2) First, prepare the shipping lock B to store. Fix the long screw as shown on the right.

3) Fix the shipping lock B with the 2 short screws at the upper back of the UNIT as shown on the right.

- Following the above procedure in reverse order, put back the shipping lock B, and then shipping lock A in its designated shipping positions when transporting.
3-4 Power Connection

Connect the power cable as shown in the following procedure.

**WARNING**
- Do not handle the power plug with wet hands. It may cause an electric shock.
- Be sure to connect the ground of the power plug.

1) Insert the power cable to inlet in the rear side of the UNIT.

2) Insert the power plug all the way into the outlet.

   Be sure to connect the ground terminal of the power plug to the terminal of outlet.

   - Connect the power cable individually to the dedicated outlet for the UNIT.

   - The plug configuration varies depending on the specifications.
   - If the plug configuration is 3P type with grounding and there is no grounding terminal hole in the outlet, use the 3 Pin-2 Pin conversion plug in the accessories.

3 Pin-2 Pin conversion plug

In that case, attach the 3 Pin-2 Pin conversion plug to the plug, and then insert the plug into the outlet. Connect the ground cable to the grounding cable terminal.
4. Preparation

- Always obtain a Safety Data Sheet (SDS) for all the materials from the suppliers and handle them only after you have fully understood the characteristics and the safety measures.
- Always use adequate protective equipment and wear appropriate clothing as specified in the applicable SDS when handling the material.
- Put the designated volume of materials into the container.
- Do not put fingers into the openings around the cup holder when inserting or removing a container.

4-1 Container and Material

Prepare and put the materials to be mixed into an adequate container.

4-1-1 Container and Capacity

The maximum mixing volume for the specified container is shown below. Be sure never to load containers with the amount exceeding the volume. Also, do not operate with an empty container.

<table>
<thead>
<tr>
<th>Type</th>
<th>Volume</th>
<th>Net weight</th>
<th>Gross weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>300 ml container</td>
<td>250 ml</td>
<td>250 g</td>
<td>310 g</td>
</tr>
<tr>
<td>150 ml container</td>
<td>120 ml</td>
<td>200 g</td>
<td>310 g</td>
</tr>
</tbody>
</table>

- Gloss weight = 300 ml container + materials or = 150 ml container + adapter + materials
- Only use the specified container.
- When a material is less than 50 g, use the 150 ml container.

- If you want to use a container other than the specified container, please contact the dealer from whom you purchased the UNIT or THINKY.
4-1-2 Preparation of Materials

Put materials into the container as follows.

1) Open the outer and inner lids. (using 300 ml container)

2) Put materials into the container.

- Loading the container with exceeding volume will result in mixing failure and leakage. Please put materials up to approx. 80% of container.

3) Close the lids tightly.

- Ensure that the materials do not contact with the brim of the container. Be sure to clean the brim by the indication of material’s SDS when it occurs. Dispose any used cloth, rag, or paper towel in accordance with national and local laws and regulations.
- Be sure to check that the screw thread of the container is clean and without damage before closing.
- Do not use damaged containers or containers with loose lids.

- To improve mixing efficiency, put materials into the container in the following order.
  - Liquid and paste materials first, and then powder materials
  - Materials of lighter specific gravity first and heavier specific gravity later
  - Materials of lower viscosity first and higher viscosity later

<table>
<thead>
<tr>
<th>Volume</th>
<th>Gross weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>310 g</td>
<td></td>
</tr>
<tr>
<td>310 g</td>
<td></td>
</tr>
</tbody>
</table>
4-2 Power On/Off

4-2-1 Power On

1) Switch on (I) the power.

   [ I ] Power On
   [ O ] Power Off

- When the power is turned on for the first time, the factory setting values are already registered in MEMORY1.
- For details to check/change the factory setting values, see 5-5 Memory Registration.

4-2-2 Power Off

1) Switch off (O) the power.

2) Disconnect the plug from the outlet.
4-3 Opening Door

After turning the power on, open the door of the UNIT as follows.

1) Push the OPEN button.

The door lock will be released.

2) Open the door of the UNIT.
4-3-1 Opening Door When Power Is Off

**CAUTION**

- Be sure to store the door unlock tool in the designated place after use.

The door of the UNIT will be locked automatically when the door is closed.

To open the door when the power is off (O), unlock according to the following procedure.

1) Pull out the door unlock tool from where it is stored at the back of the UNIT.

![Door unlock tool](image)

2) Insert the door unlock tool into the door unlock slot at the front of the UNIT.

![Door unlock slot](image)

The lock of the door will be released.

3) Put the door unlock tool back in its original position and open the door.

![Door open](image)
4-4 Setting Container

4-4-1 Setting a 300 ml Container

Set the container loaded with materials in the UNIT.

1) Weigh the 300 ml container loaded with materials. Check that the gross weight is less than or equal to the maximum mixing volume.

2) To set the container into the cup holder of the UNIT, align the 3 keyways of the container with the 3 keys of the cup holder.
4-4-2 Setting a 150 ml Container

Set the container loaded with materials into the specified adapter, and then set them in the UNIT.

1) Insert a 150 ml container loaded with materials into the adapter.

2) Push the container into the adapter until it stops.

3) Weigh the container with the adapter. Check that the gross weight is less than or equal to the maximum mixing volume.
4) To set the container with adapter into the cup holder of the UNIT, align any 3 keyways of the adapter with the 3 keys of the cup holder.

- Securely push the adapter and container into the cup holder.
4-5 Adjusting Counterbalance

• This UNIT is designed to set a container in only one side of the rotating part. If the dummy weight on the opposite side of the cup holder is not adjusted properly, it may cause off-balanced rotation, vibration/noise increase, and/or damage of the UNIT. Always adjust the counterbalance before operation.

Adjust the counterbalance after setting the container in the UNIT.

1) Turn the counterbalance adjustment dial to the weight that is measured before setting the container.

• The optimal position of the counterbalance indicator may differ depending on materials’ specific gravity, viscosity, presence/absence of the adapter, etc. If the vibration or noise increases, adjust the dial to find the position that minimizes the vibration or noise.

4-6 Closing Door

Close the door after the counterbalance adjustment. The door will be locked automatically when it is closed.

• Check that no parts of clothes or foreign objects are caught in the door.
5. Operation

5-1 Mode Setting

The following operation modes can be set.

- **STD (standard) mode:**
  Mixing and defoaming operation time can be set. The revolution speed is fixed. Only STEP 1 can be set.

- **STEP (step) mode:**
  Mixing and defoaming operation time and revolution speed can be set. A maximum of 5 steps (STEP1-5) can be registered.

  - Defoaming can be performed by the mixing mode; however, setting the defoaming mode can achieve more effective defoaming.
  - Use only the mixing mode for preparing ointment.
5. Operation

5-1-1 Setting

1) Push the START button in the STD mode or the STEP mode.

The machine will start the operation.

2) Set the mixing time or mixing speed using the SETUP button.

The mixing time or speed will be displayed.

Start Operation
5-1-1 Setting STD Mode

Set the operating conditions for the STD mode as follows.

1) Push the MODE button to light the STD lamp.
   The MIX lamp will be on. The mixing time can be set.

2) Set the mixing time with UP and DOWN buttons.
   - Set “0” when not mixing.
   - When the button is pushed and held, the time will increase/decrease by 30 sec or 1 min.
     - The maximum operation time is 30 min. When the time is over 30 min, “t t t t” will be displayed.
   
   The value will be displayed on the TIME indicator.
3) Push the SETUP button.

The MIX lamp will be off and the DEFOAM lamp will be on.
The defoaming time can be set.

4) Set the defoaming time with UP and DOWN buttons.

- Set "0" when not defoaming.
- When the button is pushed and held, the time will increase/decrease by 30 s or 1 min.
- The maximum operation time is 30 min. When the time is over 30 min, "t t t t" will be displayed.

The value will be displayed on the TIME indicator.

The operating conditions need to be registered in MEMORY to save. See 5-5 Memory Registration.
5-1-2 Setting STEP Mode

Set the operating conditions for the STEP mode as follows.

1) Push the MODE button to light the STEP lamp.

   The MIX lamp will be on.

2) Push the SETUP button.

   The TIME indicator will light up.
   The mixing time can be set.

3) Set the mixing time with UP and DOWN buttons.

   • Set “0” when not mixing.
   • When the button is pushed and held, the time will increase/decrease by 30 s or 1 min.
   • The maximum operation time is 30 min. When the time is over 30 min, “.setPosition "éééééééé“ will be displayed.

   The value will be displayed on the TIME indicator.
4) Push the SETUP button.

The SPEED indicator will light up.
The mixing speed can be set.

5) Set the mixing revolution speed with UP and DOWN buttons.

- Set "0" when not mixing.
- Increase/Decrease by 10 rpm each time when the button is pushed.
- The maximum operation speed is 2000 rpm.

The value will be displayed on the SPEED indicator.

6) Push the SETUP button.

The set mixing conditions will be displayed on the TIME and SPEED indicators.

7) Push the SETUP button.

The MIX lamp will be off and the DEFOAM lamp will be on.
The defoaming conditions will be displayed on the TIME and SPEED indicators.
8) Push the SETUP button.

The TIME indicator will light up.
The defoaming time can be set.

9) Set the defoaming time with UP and DOWN buttons.

- Set “0” when not defoaming.
- When the button is pushed and held, the time will increase/decrease by 30 s or 1 min.
- The maximum operation time is 30 min. When the time is over 30 min, “E E E” will be displayed.

The value will be displayed on the TIME indicator.

10) Push the SETUP button.

The SPEED indicator will light up.
The defoaming speed can be set.
11) Set the defoaming speed with UP and DOWN buttons.

- Set “0”, when not defoaming.
- Increase/Decrease by 10 rpm each time when the button is pushed.
- The maximum operation speed is 2200 rpm.

The value will be displayed on the SPEED indicator.

12) Push the SETUP button.

The defoaming time is set. The defoaming conditions will be displayed on the TIME and the SPEED indicators.

13) Push the SETUP button.

The DEFOAM lamp will be off and the MIX lamp will be on. The mixing conditions will be displayed.

- To enter the conditions of STEP 2-5, push the STEP button to light up the desired STEP number, and then repeat the procedures from 2) to 13).

- The operating conditions need to be registered in MEMORY to save. See 5-5 Memory Registration.
5-2 Starting Operation

- When operating for the first time or operating with pyrogenetic/high-viscosity/powder/low-boiling materials, perform a short trial operation (for 15-30 sec.) to check how the temperature rises, and then extend the operation process time.

**WARNING**

To stop operation in the middle, refer to 5-3. *Stopping Operation.*

**CAUTION**

- Do not splash or spill materials in the UNIT.

Start operation as follows.

1) Check that the door is closed.

2) Check that the set operating conditions are displayed on the TIME and SPEED indicators, and then push the START/STOP button to start the operation.

The TIME indicator starts a countdown, and operation stops when the indicator displays “0.” When operation stops completely, the buzzer beeps.

- The door of the UNIT is locked when starting operation and stay closed until the operation stops. When you need to open the door during operation, stop the operation so that the door will be unlocked.
5-3 Stopping Operation

- When there is an abnormal vibration/sound/odor/smoke, immediately stop operation, turn off the power switch and disconnect the plug.

- When the rotation does not stop, Err4 is displayed, and the buzzer beeps, turn off the power switch and disconnect the plug immediately.

**WARNING**

**CAUTION**

- Attend to the UNIT within 30 minutes after operation.

Stop the UNIT during operation as follows.

1) Push the START/STOP button.

   The rotation will stop by brake.

2) When rotation stops completely, the door lock is released and can be opened.
5-4 Removing Container from Cup Holder

Remove the container/adapter from cup holder after operation is finished.

(A 300-ml container is shown below as an example.)

1) Open the door of the UNIT.

2) Remove the container (or the adapter) from cup holder.

3) Open the lids of container and check the performed status.

- If the performed status is insufficient, adjust the operation time and repeat mixing.
- The performed status varies depending on the type/viscosity/specific gravity of materials as well as the property and amount of additives, even when using the same setting. It is advisable to change the conditions several times to find standard settings for each material.
5-5 Memory Registration

Up to 5 operating conditions can be registered and saved in each STD (standard) mode and STEP mode.

<table>
<thead>
<tr>
<th>STD mode</th>
<th>Only STEP 1 can be registered in one memory number</th>
</tr>
</thead>
<tbody>
<tr>
<td>STEP mode</td>
<td>A maximum of 5 steps can be registered in one memory number</td>
</tr>
</tbody>
</table>

- The registered operating conditions will remain even after the power has been turned off.
- A condition that is not registered as a memory is lost when the power is turned off or when other registered memories are loaded. To keep a setting condition, save it in 1 of the 5 recipes.

5-5-1 Checking Registered Memory

- The factory setting values below are already registered in each STD and STEP mode.

<table>
<thead>
<tr>
<th>MEMORY No.</th>
<th>Operation Mode (MIX/DEFOAM)</th>
<th>Operation Time (TIME)</th>
<th>Revolution Speed (SPEED)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>MIX</td>
<td>30 s</td>
<td>2000 rpm</td>
</tr>
<tr>
<td></td>
<td>DEFOAM</td>
<td>30 s</td>
<td>2200 rpm</td>
</tr>
<tr>
<td>2~5</td>
<td>MIX</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td></td>
<td>DEFOAM</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>

Check the registered conditions (mode/time/speed) as follows.

1) Push the MODE button to light the STD or STEP lamp to see the condition.

2) Push the Control button to load the selected memory to check.

3) Push the NEXT button to change the memory.

4) Push the Display button to see the revolution settings.

5) Check the revolution speed by pressing the SPE button.
2) Push the MEMORY button to light the memory number to check.

- The MEMORY lamp is lit in the order of 1→2→3→4→5 each time the MEMORY button is pushed.

3) Push the STEP button to light the step number to check.

- The STEP lamp is lit in the order of 1→2→3→4→5 each time the STEP button is pushed.

4) Push the SETUP button to light the MIX or DEFOAM lamp to see the condition.

5) Check the operating time and revolution speed that are displayed on the TIME and SPEED indicators.
5-5-2 Flowchart of Memory Registration

- STD (standard) Mode

Selecting Memory

- MEMORY 1
  - MEMORY button
  - Step (fixed)
    - STEP 1
      - Set Mixing Time
      - SET UP button
      - Set Defoaming Time
      - SET UP button

Operating conditions can be registered in STEP 1.

A setting of STEP 1 can be registered in each memory number.

- MEMORY 2
  - MEMORY button
- MEMORY 3
  - MEMORY button
- MEMORY 4
  - MEMORY button
- MEMORY 5
  - MEMORY button

Push the MEMORY button to display memory 1 to 5.
**STEP Mode**

**Selecting Memory**
- MEMORY 1
- MEMORY 2
- MEMORY 3
- MEMORY 4
- MEMORY 5

**Selecting Steps in Each Memory**
- STEP 1
- STEP 2
- STEP 3
- STEP 4
- STEP 5

**Setting Operating Conditions in Each Steps**
- Display Mixing Condition
- Display Defoaming Condition
- Set Mixing Time
- Set Defoaming Time

Push the MEMORY button to display memory 1 to 5.

A maximum of 5 steps can be registered in 1 recipe. After a step is operated, the following steps will be operated continuously.

Operating conditions can be registered in each step.
5-5-3 Memory Registration for STD Mode

Register to save the operating conditions for standard mode in the memory as follows.

1) Push the MODE button to light the STD lamp.

2) Push the MEMORY button to light MEMORY No. lamp to register.

3) Set the operating conditions.

   To set operating conditions, refer to 5-1-1 Setting STD Mode.

4) Push the MEMORY button for more than 1 second.

   The selected number of the MEMORY lamp will blink and the buzzer will beep.
5-5-4 Memory Registration for STEP Mode

Register the operating conditions for STEP mode to save in the memory as follows.

1) Push the MODE button to light the STEP lamp.

2) Push the MEMORY button to light the number of the MEMORY lamp for setting.

3) Push the STEP button to light the number of the STEP lamp for setting.

4) Set the operating conditions.

- To set the operating conditions, refer to 5-1-2 Setting STEP Mode.
- Repeat the procedure 3)-4) to set the operating conditions for STEP1-5.
5) Make sure the last number of the STEP lamp is lit, and then push the MEMORY button for more than 1 second to register.

The MEMORY lamp will blink and the buzzer will beep.

- The operating conditions that can be registered in memory will be from **STEP1 to the lit number**. Even if there is a condition set after the selected (lit) number, the condition will be deleted when registered.

  e.g.) When the condition of STEP1-4 is set:
  
  If the lamp of STEP 3 is lit and the MEMORY button is pushed and held, the conditions from 1-3 will be registered and the condition in STEP 4 will be deleted.

2) Push the MEMORY button for more than 1 second to save.

3) Push the MEMORY button for more than 1 second to save.

5-5-6 Settings

When setting conditions:

1) Push the MEMORY button for more than 1 second to save.
5-5-5 Changing Registered Memory

Registered memories can be changed by reregistering the setting conditions.

5-5-6 Selecting Memory

When operating with a setting registered in MEMORY, select the setting condition to start operation.

1) Push the MODE button to light the mode lamp you want to check.

2) Push the MEMORY button to light MEMORY No. lamp to operate.

3) Push the START/STOP button to start operation.
6. Maintenance

6-1 Inspection

In order to use the UNIT safely, perform inspection regularly.

[WARNING]
- Turn off the power switch and disconnect the plug before inspection.
- Do not handle the power plug with wet hands. It may cause an electric shock.

6-1-1 Daily Inspection

Check the following daily.

- Check whether any material or foreign objects are adhered to the inside or around the cup holder and rotating part. Clean if any adhesion is observed.
  - For cleaning, refer to 6-2 Cleaning.

- Check whether there is any external damage such as breakages, large dents or rust. Do not use the UNIT if there is a problem.
6-2 Cleaning

- Turn off the power switch and disconnect the plug before cleaning.
- Do not handle the power plug with wet hands. It may cause an electric shock.

- Do not insert fingers into the openings around the rotating tray.

When the UNIT becomes dirty, clean it as follows.

1) Switch off (O) the power.

2) Disconnect the plug from the outlet.

3) Wipe off dirt (materials, etc.) from inside/around the cup holder, rotating tray, control panel, etc. with a cloth, waste cloth or paper towel.
   - If dirt or stains cannot be removed by a dry cloth, wipe off with a wet cloth, waste cloth or paper towel with water or ethanol, and then wipe with a dry cloth again.

- For cleaning, do not use benzine, thinner, alkaline detergent or bleach, which may deteriorate or discolor the UNIT.
- Do not splash the UNIT directly with water or neutral detergent.
- Dispose of such material as specified in the SDS of the material in use.
- Dispose any used cloth, rag, or paper towel in accordance with national and local laws and regulations.
6-3 Troubleshooting

When you have any problems with the UNIT, check the following before contacting for repair.
If the problem still cannot be solved, contact the dealer from whom you purchased the UNIT or THINKY.

- For contact information, refer to Introduction.

6-4 Error Display

There is a door sensor, a vibration sensor and a rotation sensor in the UNIT. Error will be displayed on the control panel under abnormal conditions, and the UNIT will stop. If the cause is clear, resolve the error by removing the cause. If the cause or the content of the error is unclear, contact the dealer from whom you purchased the UNIT or THINKY.

- For contact information, refer to Introduction.

The following table shows the main causes and measures for errors.

If a fuse is blown, replace it as follows.

1) Switch off (O) the power.

![Power switch](image1)

2) Disconnect the plug from the outlet.

![Outlet and plug](image2)

3) Using a screwdriver (Phillips-head or Flat-head), turn the fuse holder on the rear side of the UNIT counterclockwise.

When turning the fuse holder a little, the fuse will be pushed out by the spring inside.
4) Pull out the fuse holder by hand.

5) Remove the fuse from the fuse holder.

6) Insert a new fuse into the fuse holder.

7) Insert the fuse holder into the fuse port of the UNIT.

8) While pushing the fuse holder into the UNIT, turn it clockwise by a screwdriver until it stops.

- A blown fuse must be discarded in accordance with national and local laws and regulations.
6-6 Warranty and After-sales Service

Please contact the dealer from whom you purchased the UNIT or THINKY if anything is unclear about the maintenance/after-sales service/handling of the UNIT.

- For contact information, refer to Introduction.

THINKY will repair or replace the UNIT within the warranty period in the case there are any defects where the UNIT has been operated in conformity with the Instruction Manual and other reference materials officially issued by THINKY, and/or any defects in manufacturing under proper usage. The warranty period is for 12 months from the date of delivery/inspection. However, some cases under certain conditions are not covered by the warranty. For details, please refer to Warranty and Liability.
